## Group Nb / Nc Floater/Camber Kit

Standard Floater Kits

Floater Kits also available with Camber/Toe

These Race Products Camber Kits have been designed to suit Group Nc Cars, giving the safety benefits of a fully floating hub, and performance advantage of up to 0.95 degrees of Negative Camber, and Toe if required.

Our Group Nb / Nc Camber Kit uses a Barrel Spline drive system. We use different spline sizes for lighter Cars, such as Torana, Cortina, Mazda RX2 etc and heavier cars such as Falcon, Galaxy Mustang, Camaro etc

Race Products Camber and Floater Kits come complete with All Parts required to complete the build. Including Our Standard Billet 4340 Axles. (Surcharge required for custom axles)

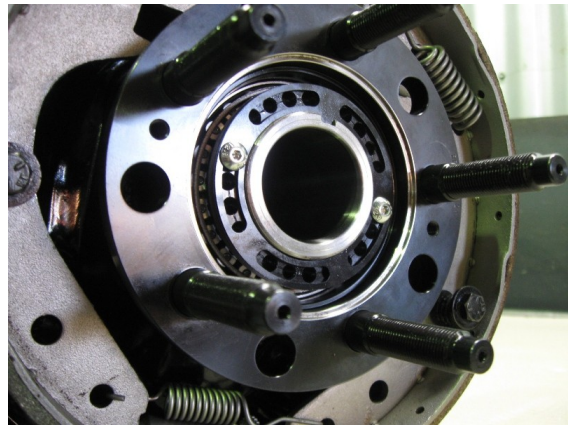

Our system allows the original drum brakes to be retained, by using a modified original back plate. The back-plate needs to be machined, and welded to the supplied adaptor cup, this then simply bolts on to the new 2 piece spindle and housing end flange.

The cambered spindles are available in 0.5 or 0.95 degrees to suit Group Nc / Nb, and larger angles for other classes.

The hubs come with our unique locking system with preload shims.

The 4140 ChromeMoly drive flange fitted, with the axle and barrel spline

6061 Aluminium end caps and sealing O-Rings fitted.

We can supply kits, for DIY Fitment or offer a full fabrication service to customer supplied diff housings
